

Amendments to the Claims:

Claims 41, 42 and 50 to 52 are amended as set forth below.

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Claims 1 to 40 (Cancelled).

41. (Currently Amended) A surgical microscope comprising:

a viewing unit for viewing an object and said viewing unit defining a viewing beam path;

an image data supply for supplying image data;

5 an image projection module connected to said image data supply for receiving said image data and inputting said image data into said viewing beam path;

said image projection module including an image display unit for displaying said ~~data image~~ image data;

10 a first beam splitter mounted in said viewing beam path for receiving said ~~[[data]]~~ image data displayed by said display unit and passing said image data into said viewing beam path;

an image recording module for recording said ~~[[data]]~~ image data and an object image of said object supplied by said viewing unit;

15

said image recording module including an image sensor;
a second beam splitter mounted in said viewing beam path for

directing said object image onto said image sensor;

20 said image sensor generating an image signal from said
object image;

 said image recording module further including a mixer
connected to said image sensor for receiving said image signal
and being connected to said image data supply for receiving said
image data to mix said image signal and said image data and
25 generate an output signal;

 a video-recorder/monitor connected to said mixer for
receiving said output signal for display to a surgeon; and,

 a shutter interposed between said first beam splitter and
said object to suppress said object image to facilitate viewing
30 said image data in said viewing unit.

42. (Currently Amended) The surgical microscope of claim 41,
said image projection module further including an imaging optic
having a plano-convex lens and a plano-concave lens mounted
downstream of said image display unit for transmitting said
5 [[data]] image data to said first beam splitter.

43. (Previously Presented) The surgical microscope of claim 42,
wherein said plano-concave lens is disposed downstream of said
image display unit and said plano-convex lens is interposed
between said plano-concave lens and said first beam splitter.

44. (Previously Presented) The surgical microscope of claim 43,
wherein said image display unit is an LCD image display unit.

45. (Previously Presented) The surgical microscope of claim 44, wherein said plano-convex lens has a first focal length and said plano-concave lens has a second focal length; and, the ratio of said first focal length and said second focal length lies within a range from 1.9 to 2.5.

46. (Previously Presented) The surgical microscope of claim 45, wherein said plano-convex lens is a first plano-convex lens; said image projection unit further includes a concave-convex lens and a second plano-convex lens; and, said first plano-convex lens, said plano-concave lens, said concave-convex lens and said second plano-convex lens all are arranged between said LCD image display unit and said first beam splitter.

47. (Previously Presented) The surgical microscope of claim 44, wherein the brightness of said LCD image display unit is increased by providing a time-dependent sequential illumination of a reflection display with only a single color.

48. (Previously Presented) The surgical microscope of claim 44, wherein said LCD image display unit includes a reflection display illuminated sequentially with different colors as a function of time.

49. (Previously Presented) The surgical microscope of claim 41, wherein said image sensor is a CCD chip.

50. (Currently Amended) The surgical microscope of claim 41,

wherein said image display unit incorporates a reflection display driven at a clock frequency and includes a rotatably mounted filter wheel for illuminating said reflection display; and, a device for synchronizing the rotation of said filter wheel with
5 ~~the clock ratio~~ said clock frequency of said reflection display.

51. (Currently Amended) A surgical microscope comprising:

a viewing unit for viewing an object and said viewing unit defining a viewing beam path;

an image data supply for supplying image data;

5 an image projection module connected to said image data supply for receiving said image data and inputting said image data into said viewing beam path;

said image projection module including an image display unit for displaying said ~~data image~~ image data;

10 a first beam splitter mounted in said viewing beam path for receiving said ~~[[data]]~~ image data displayed by said display unit and passing said image data into said viewing beam path;

an image recording module for recording said ~~[[data]]~~ image data and an object image of said object supplied by said viewing
15 unit;

said image recording module including an image sensor; a second beam splitter mounted in said viewing beam path for directing said object image onto said image sensor;

said image sensor generating an image signal from said
20 object image;

said image recording module further including a mixer connected to said image sensor for receiving said image signal

and being connected to said image data supply for receiving said image data to mix said image signal and said image data and
25 generate an output signal;

a video-recorder/monitor connected to said mixer for receiving said output signal for display to a surgeon;

said image projection module further including an imaging optic having a plano-convex lens and a plano-concave lens mounted
30 downstream of said image display unit for transmitting said [[data]] image data to said first beam splitter; and,

said image display unit having a reflection display driven at a clock frequency and including a rotatably mounted filter wheel for illuminating said reflection display; and, a device for
35 synchronizing the rotation of said filter wheel with ~~the clock ratio~~ said clock frequency of said reflection display.

52. (Currently Amended) A surgical microscope comprising:

a viewing unit for viewing an object and said viewing unit defining a viewing beam path;

an image data supply for supplying image data;

5 an image projection module connected to said image data supply for receiving said image data and inputting said image data into said viewing beam path;

said image projection module including an image display unit for displaying said ~~data-image~~ image data;

10 a first beam splitter mounted in said viewing beam path for receiving said [[data]] image data displayed by said display unit and passing said image data into said viewing beam path;

an image recording module for recording said [[data]] image

15 data and an object image of said object supplied by said viewing unit;

 said image recording module including an image sensor;
a second beam splitter mounted in said viewing beam path for directing said object image onto said image sensor;

20 said image sensor generating an image signal from said object image;

 said image recording module further including a mixer connected to said image sensor for receiving said image signal and being connected to said image data supply for receiving said image data to mix said image signal and said image data and
25 generate an output signal;

 a video-recorder/monitor connected to said mixer for receiving said output signal for display to a surgeon;

 a shutter interposed between said first beam splitter and said object to suppress said object image to facilitate viewing
30 said image data in said viewing unit;

 said image projection module further including an imaging optic having a plano-convex lens and a plano-concave lens mounted downstream of said image display unit for transmitting said
[[data]] image data to said first beam splitter; and,

35 said image display unit having a reflection display driven at a clock frequency and including a rotatably mounted filter wheel for illuminating said reflection display; and, a device for synchronizing the rotation of said filter wheel with ~~the clock ratio~~ said clock frequency of said reflection display.
